

About Trucksters

Trucksters is a transport operator offering FTL (Full Truck Load) long-distance freight transport services with an innovative truck relay system based on Artificial Intelligence and Big Data. The optimization makes it possible for hauliers to sleep more at home, because the driver drives and the semi-trailer is switched with another truck, so that the goods do not stop. The result is gains in speed, efficiency and safety. **Trucksters** reduces road transit time by up to 50% by allowing trucks to be continuously on the move through relays.
